## DETAILED ACTION

### *Claim Objections*

Claim 24 is objected to because of the following informalities: "dupes" (line 3) should be ~~duplex~~ and "meet" (line 10) should be ~~mate~~ to be consistent with the marked copy. Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 23, 26, and 29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of "the first coupling component is configured so as to facilitate a flow of ink therethrough **when the reservoir is formed** so as to have a base which is substantially flat where ink enter the reservoir" is unclear. What does the time when the reservoir is formed has anything to do with the configuration of the first coupling component? How does such relationship between the configuration and the time the reservoir is formed resulted in having a **base**

Art Unit: 2861

which is substantially flat where ink enter the reservoir? What element has the base?

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Pawlowski, Jr. et al (US 5,852,459).

Pawlowski, Jr. et al discloses all claimed limitations as follows:

- A replaceable ink container assembly (300)
- A container (302) configured to hold ink
- A first coupling component (see illustration below) of a duplex coupler formed to the container
- The duplex coupler having a poppet (308)
- A complimentary second coupling component (142) of a reservoir (149)
- The steps of the claimed method are deemed to be clearly anticipated in view of the provision by Pawlowski, Jr. et al of the structure listed above.
